Co-funded by the European Union under Project n°101076386. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or CINEA. Neither the European Union nor the granting authority can be held responsible for them.

About

DEESME 2050 builds on the developed DEESME **multiple benefits approach** to capacitate, assist and motivate companies in the furniture sector and its value chain to overcome the obstacles in **energy efficiency measures uptake** in 4 pilots: Bulgaria, France, Italy and Poland.

The project also builds capacities of the companies' staff on **all working levels** and endorses **sustainability** through the preparation of **financing, standardisation and replication** in cooperation with associations and policymakers.

Our objectives

Communicate with companies in the furniture sector to make them consider energy efficiency in every business activity through information activities on energy risks (climate change, greenhouse gas emissions)

Apply tools and methodologies in an integrated form with training activities, energy audits, investment feasibility, energy management systems

Facilitate the most ambitious choices of companies by systematizing economic and financial solutions already available

Frame a political and regulatory scenario to show that reducing energy consumption will create more competitiveness on the market and fight climate change
